## Investment Strategy

The Fund utilizes an opportunistic approach to find undervalued companies and invests at least 80% of its net assets in equity securities and other securities with equity characteristics of US mid capitalization (midcap) companies. The Investment Adviser generally uses a bottom-up approach when recommending and selecting securities, focusing on individual stock selection rather than attempting to time the highs and lows of the market or concentrating investments in certain sectors or industries. The Fund may invest in "growth" or "value" securities and normally holds between 40-70 stocks.
